ONLINE EXAM / QUIZ SYSTEM
(MCQ&RESULTS)

No.	Name	Section
1	محمد صابر فريد كليله	2
2	محمود عبدالحميد محمد الوكيل	2
3	محمد سامي محمد عبدالعزيز شكر	2
4	خالد اشرف محمد شاكر المصري	2
5	يوسف باسم كامل محمد حسن	2

Planning (Project Plan)

Project Identification

Project Name: Online Exam / Quiz System (MCQ + Results)

Current Problem

1. Traditional exams require considerable time and effort for preparation, distribution, collection, and grading.
2. Manual grading can cause calculation or marking errors.
3. Students may wait a long time to receive their results.
4. Managing a large number of questions and answers on paper is difficult.
5. It is difficult to generate consistent reports about student performance.
6. Keeping previous exam results and question banks organized can be time-consuming.

Description about Project

The Online Exam / Quiz System is a web-based system that allows instructors to create exams and quizzes using multiple-choice questions (MCQ), manage question banks, assign exams to students, collect answers, automatically grade submitted attempts, and display or generate results. Students can log in, view available exams, answer questions within the allowed time, submit their attempts, and view their scores according to the system rules. The system reduces manual grading, saves time, improves accuracy, and keeps exam and result data organized.

System Request

Item	Description
System Request	Online Exam / Quiz System — MCQ&Results
Project Sponsor	Course Instructor / Department
Business Need	Automate exam creation, delivery, grading, and result management.
Business Requirements	User registration/login; question bank; exam creation; MCQ answering; timer; submission; automatic grading; result display; reports.
Business Value	Saving time, reducing grading errors, improving accessibility, faster results, organized records.
Special Issues / Constraints	Internet availability, exam time limits, account security, question confidentiality, backup and recovery.

Business Needs

7. Reduce the effort required to conduct exams.
8. Provide automatic and consistent grading for MCQ exams.
9. Make exams available online to authorized students.
10. Provide quick and accurate results.
11. Maintain historical exam and student-performance records.

Feasibility Analysis

Technical Feasibility

12. The system can be implemented as a web application using HTML, CSS, JavaScript and a suitable backend/database technology.
13. A database is required to store users, exams, questions, choices, attempts, answers, and results.
14. The system can run on common computers and mobile devices through a web browser.
15. A development environment such as Visual Studio Code can be used.
16. Internet/network connectivity is required for online exams.

Economic Feasibility

17. The project can be developed using widely available development tools.
18. Automation reduces the long-term cost of manual grading and paper handling.
19. The main costs are development, hosting, maintenance, backup, and security.
20. The expected benefits include saved instructor time and faster result processing.

Organizational Feasibility

21. Instructors can manage questions and exams through an administration interface.
22. Students can use the system with normal web-browser skills.
23. The department can use reports to monitor student performance.
24. Training requirements are expected to be low because the interface is designed to be simple.
